

The Next Generation Of Account Access Is Here, Now!

With the April 1, 2009 launch of its next generation online account access product, Internet Banking 5.0, Worldwide Interactive Services, Inc. takes its heritage of innovative account access solutions to the next level.

Internet Banking 5.0's customization features enable both the credit union and members to customize many aspects of the user interface. The credit union can add rotating marketing messages in both images and text to the login page as well as a banner to the top of each page throughout Internet Banking and Billpay. These banners can be used to promote services such as loan or certificate specials, events like an annual meeting, or anything else you would like to communicate to your membership.

The member-customizable interface allows members to design their own Internet Banking experience with a selection of themes, background images and font size. Less tech-savvy users, such as senior citizens, can have a plain and simple interface with a large font size to make account information easier to read. Younger "Generation Y" users can personalize their online experience with backgrounds representing their favorite sports or other custom graphics or themes.

The account access functionality has also been greatly enhanced in Internet Banking 5.0. The numerous user interface enhancements make account information and transaction history data easier to understand and navigate. A new "Recent Transactions" option on the Account Overview page allows members to view the 5 most recent transactions from all their accounts on one screen at the same time. With one mouseclick a member can see his payroll directly deposited into his share draft account, a large purchase posted to his Visa, and a payment from his savings to his credit union car loan was processed.

Another feature of Internet Banking 5.0 is eSafe, an online safe deposit box. Members can upload electronic copies of documents such as birth certificates, wills, deeds, or other financial information, to be stored on our secure servers. Knowing that these documents are safe and accessible from any PC can make rebuilding from a disaster much easier.

Even with all these new features Internet Banking 5.0 remains easy to use for members and easy to maintain for the credit union. It interfaces seamlessly with more than 30 data processing platforms and interfaces can be developed for other platforms.
